

Dear members of the class "Computing: Little Bits to Big Ideas"

Since our last class was canceled due to the "social distancing" we are all hopefully practicing to avoid spread of the coronavirus, I have put together at least a half-class of material that you can read on your own.

The topic is "Expert Systems", which was one of the great successes of AI, and are in use everywhere - to the point that they are no longer considered "AI".

The final presentation, and all information related to the class, is on our class website, here (paste into your browser): tinyurl.com/olli-computing I believe this link was also given to you in an introductory email.

I'd like to say upon parting that I really enjoyed teaching to such an engaged class. Your questions were always interesting, and also helped to clarify points that I perhaps glossed over. If you followed the material, you should feel great about it, since we did a crazy-crash-course of the better part of a curriculum in Computer Science. I hope that you've enjoyed the course, and found it stimulating.

-Lenny
