

When I mentioned yesterday that I was going to make the Tax credit and rebate PowerPoint into a PDF, Norm asked if I would do that for the other sessions.

I will look into that - but it probably won't happen and get on the download page until after the Holiday break. I will make the effort for all of the sessions.

I said several time during the sessions how much money would be saved if the USPS would replace their combustion vehicles with EVs. Today an article appeared that said that the USPS will only buy electric vehicles starting in 2026. I would prefer sooner but realize with the age of their fleet that it might not be possible with some vehicles needing replacement before EV version is available.

PS One person in the group mentioned trips to Big Bend Texas, so I had to look. Traveling to BB by way of Electrify America locations is a reasonable plan. However there are only a handful of charging options in Terlingua, Texas.

Best Wished and email if you have a question.

US Postal Service commits to buying 100% electric trucks by 2026

Michelle Lewis

In a major reversal, the US Postal Service (USPS) has announced that it will ensure that 75% of new vehicles purchased in the next several years will be electric. By 2026, that will increase to 100% of purchases.
